

Everyone loves a breakthrough.
But what does it take to get there?

alt.leather_

alt.leather_ Scaling next-gen materials isn't a lab challenge, but an infrastructure one. With the right partners and patient capital, breakthroughs can move from prototypes to real-world products. Are you with us?

4mo •

Alt. Leather was born out of the desire to do leather alternatives differently. From day one we've used zero petroleum-derived plastics in our formulations, and of course, all our materials are also free from all animal products. We really do use 100% bio-based ingredients, which means mostly plant-based inputs, with a sprinkle of minerals added for the optimal balance. 🌱

Zero-petroleum is the real breakthrough here. 🌱 The challenge with 100% bio-based materials has always been maintaining tensile strength without synthetic binders. It's great to see Alt. Leather proving it can be done. This is exactly where the South Indian fiber industry needs to head. Exciting times for next-gen materials! 🚀

Herald Sun

“In ten years, my hope is that we’ve helped redefine what ‘leather’ means altogether.”

Tina Funder,
Founder, Alt. Leather

alt.leather_

alt.leather_ “My hope is that when people say leather, they think of a next-generation material that is regenerative, circular and truly future-proof.” - Tina Funder, Founder, Alt. Leather.

Alt. Leather was recently featured in Australian newspaper The Herald Sun in an article spotlighting our story as a growing next-gen leather innovator with a 100% bio-based material.

Find it on our Press & Blog page. Link in Bio.

Q:
How do we know if
bio-based leather
is better for the
environment?

A:
Due to life cycle
assessments.

It looks at everything...

from raw materials
and production

through to
disposal

...to understand things like:

carbon emissions

water use

and waste

coming soon

Stay tuned for Alt.
Leather's promising
LCA results

Big news: \$1.15M funding secured

alt.leather_ We spent two days sharing our material with designers, makers and curious minds at [#FutureFabricsExpo](#) in London last week, and wow, what a response.

♥ The comments you shared with us, like "Keep going. This is great" and "I love this material" are the fuel we need for knowing we're on track in bringing you a leather alternative with zero petro-plastics, zero animal products and zero compromises. It was a whirlwind for our small team, but every conversation reminded us why we do what we do.

Thanks to everyone who stopped by the Innovation Hive to say hi.

alt.leather_ Alt. Leather makes its runway debut at Paris Couture Week 🍷

Couture 'GLACIER' Look 22

YUIMA NAKAZATO couture Autumn/Winter 2025-26

+

After three years of R&D, our 100% bio-based leather alternative has officially stepped out of the lab - featured in three stunning looks by Japanese designer Yuima Nakazato in his 'GLACIER' collection at Paris Haute Couture Week.

We're deeply grateful to [@yuimanakazato](#) for recognising the beauty and potential of Alt. Leather.

🌱 This moment is what we've been building toward: a better
